

## I. [Arduino Electronic Dice Project with Accelerometer](#)

Here's how it works - pick up the die, shake it, watch while the numbers change until it stops on a number between 1 and 6. It's that simple... It's just like a real die except it's huge and has circuitry and a 3D printed enclosure.

Figure 1 The 3D Printed Enclosure

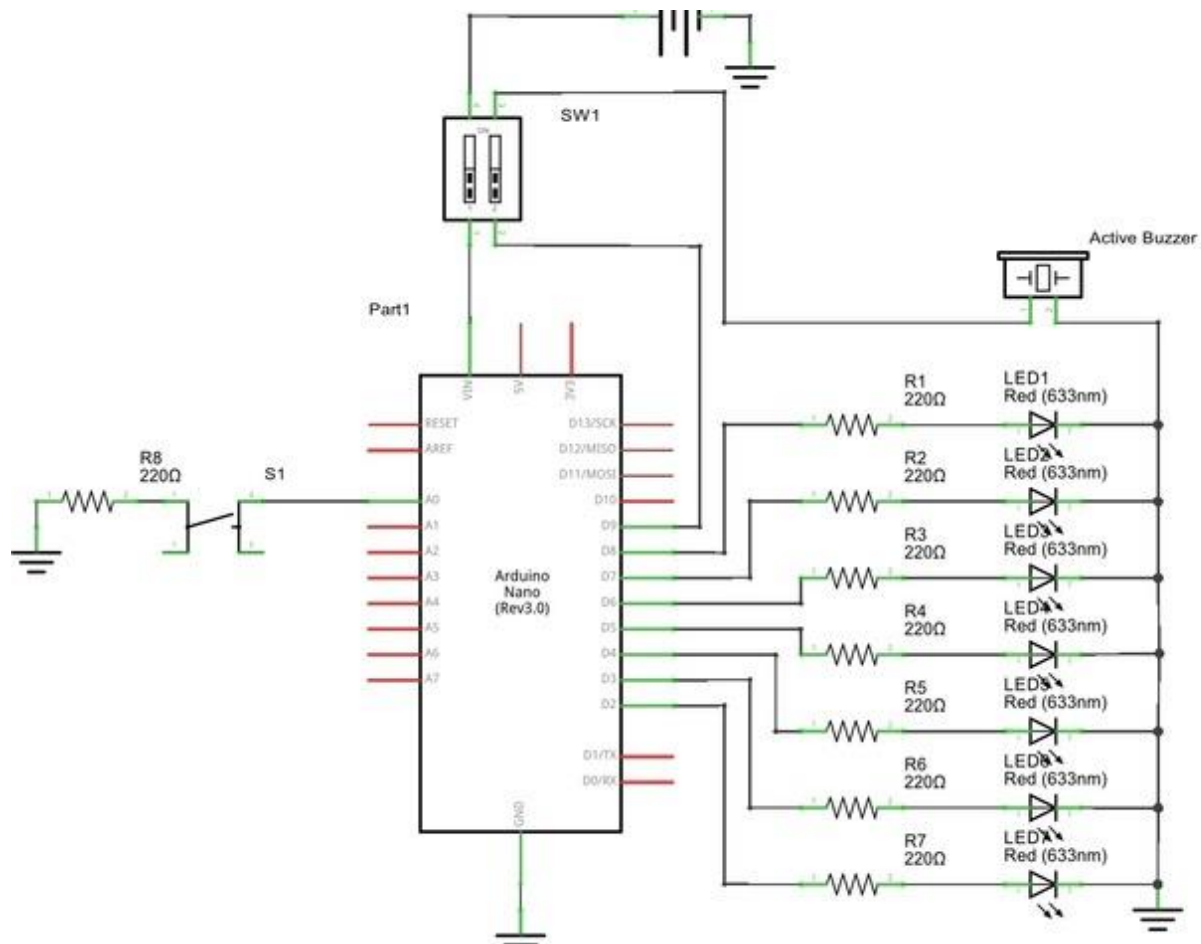

## **II. Arduino Dice Parts List**

1. Arduino Nano
